

Containment Solutions' Kombatank™ System is designed to provide product storage options for the dispensing of new or the collection of used products. Storage options are available in a variety of combinations for automotive oil products (new/used oil, new/used antifreeze, new/new...etc.). This system features complete 360° secondary containment for not only both primary tanks, but also all of the tank top assembly items on each tank unit. Additional features include a locking self-containing and self-diking cabinet style that provides tamper resistant security as well as protection from the elements for indoor or outdoor installations.

The versatility of this unique design will meet any specific requirements for the end user, as well as enhance the overall aesthetics for the vehicle service operation.

A complete selection of Containment Solutions storage systems are available nationwide. Our experienced sales staff is ready to assist you in selecting the tank best suited to fit your needs, or to custom design a complete system for you.
